Title: **Comparative study of GUIs in Top Web Browsers**.

Abstract:

This paper provides a comprehensive examination of the Graphical User Interfaces (GUIs) of top four leading Web Browsers: Chrome, Firefox, Safari, and Edge. The study provides the insight of various aspects of user experience, functionality and performance. We will also explore the key features like Tab Management, Privacy controls, Developer Tools, Performance and also Security features. This study also provides the valuable insights about the strengths and weaknesses of each browser.
